

Company Profile

Gigraf

Labeling, packaging AND paper converting

Since 1925

www.gigraf.it

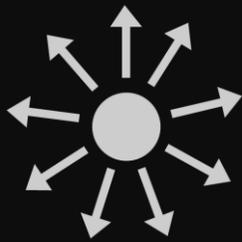

A CENTURY OF HISTORY

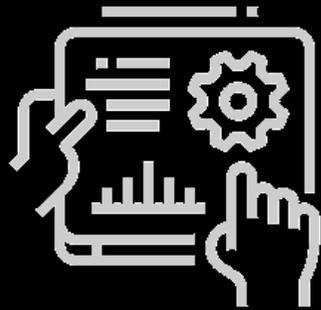

Founded in 1925 under the name Arti Grafiche Gelmini, Gigraf boasts a long and well-established experience in the printing industry, becoming a benchmark for major food and pharmaceutical companies. The company guarantees high-quality standards and offers a wide range of customized solutions for its clients.

LONG AND WELL-
ESTABLISHED EXPERIENCE
IN THE PRINTING INDUSTRY

DIVERSE PRODUCTS

In addition to printing on paper and related materials, its product range has also included filter bags, melamine-coated paper, stationery items, and innovative labels made from plastic materials. This integrated approach has allowed the company to flexibly respond to the ever-evolving market needs and to strengthen its reputation as a reliable and cutting-edge partner.

RIGOROUS CONTROLS

The company has successfully combined expertise and technological innovation, adopting cutting-edge solutions since the 1970s to optimize production processes. The implementation of an operational procedures system compliant with ISO standards, integrated into a corporate intranet, along with real-time controls throughout the entire production chain, has led to a significant reduction in production costs and order completion times.

Integrated IT Systems

This has been made possible through extensive use of information technology and the presence of a highly specialized internal department dedicated to plant design and setup. In 1989, the company developed a fully autonomous label production process, relying exclusively on digital techniques to ensure maximum efficiency and quality.

SOLUTIONS TO
OPTIMIZE
PRODUCTION
PROCESSES

On-Site Service

In addition to technological advancements, the company has developed a highly efficient on-site support service, offering direct assistance to customers through qualified personnel capable of providing technical and operational consulting on location.

CONTINUOUS IMPROVEMENT

Advancements in process technologies and improvements in product quality have nearly eliminated issues related to the final product's usability by customers. This has had a direct impact on the productivity of partner companies, enabling them to optimize operations and increase efficiency. The ability to deliver a product with high uniformity standards, characterized by extreme precision, reliability, and long-term consistency, is a key factor for large-scale users who require high-performance and stable solutions over time.

STRONG PARTNERSHIPS

At the same time, the adoption of sophisticated IT procedures operating in an extranet environment has ensured total transparency and continuous monitoring of the entire production cycle. These tools have made it possible to establish and strengthen a strategic collaboration with clients, transforming the relationship into an active and proactive partnership. Often, this synergy results in the joint development of new products and technologies, further reinforcing the bond between the company and its commercial partners while ensuring continuous adaptation to the ever-evolving market demands.

HIGH STANDARDS

In full compliance with strict quality standards, the company implements a conformity control system throughout all phases of the production process, ensuring continuous monitoring of every aspect of manufacturing. Thanks to the integration of digital technologies and an electronic certification system, multiple critical parameters are precisely analyzed, including:

- ✓ Chromatic level, to ensure accurate color matching;
- ✓ Physical, chemical, and mechanical properties of raw materials, guaranteeing compliance with the required technical specifications;
- ✓ Dimensional tolerances, ensuring that every product strictly adheres to the established specifications;

CONTINUOUS AND IN-DEPTH MONITORING OF EVERY ASPECT OF THE PRODUCTION PROCESS

- ✓ Correct digital coding of products, through digital code validation;
- ✓ Format and printing references, which must be accurate and perfectly aligned with the required standards.

TRANSPARENCY

To support these control activities, detailed statistical and analytical documentation is produced, allowing for the traceability of every production phase and providing a comprehensive report on the inspections carried out. All this data is immediately accessible through the company's IT system. This approach ensures transparency for commercial partners and adds value in terms of reliability and security of the final product, enabling a more efficient management of supplies.

SAFETY AND RELIABILITY

The company ensures the protection of products from potential chemical and mechanical agents that could compromise their integrity, guaranteeing easy and safe handling by customers during in-line usage. This is achieved through the use of high-quality materials, precise manufacturing processes, and the application of rigorous standards, allowing products to maintain their characteristics even under complex operational conditions.

TAILORED SOLUTIONS

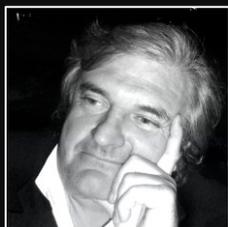

The high level of quality and reliability achieved over the years has enabled collaborations with some of the most important industrial companies, both nationally and internationally. Thanks to continuous innovation efforts and adherence to excellent production standards, the company has established itself as a trusted partner for businesses across various sectors, offering customized solutions that meet the specific needs of each client.

EXTENSIVE EXPERTISE

The prestige and recognized quality of GiGraf Srl's packaging references go beyond the label sector, extending to a wide range of printed products that cater to a diverse clientele. The company stands out for its ability to produce various printed materials, from promotional items such as brochures, posters, and leaflets to corporate publications and editorial products.

This production flexibility, combined with attention to detail and the pursuit of innovative solutions, has strengthened the company's reputation in the printing and packaging industry over time. It has become a benchmark for clients seeking reliability, excellence, and customization in their printed products.
