LABELING, PACKAGING AND PAPER CONVERTING

SINCE 1925

www.gigraf.it

Built in Milan, 1925

Founded in 1925 under the name Arti Grafiche Gelmini, Gigraf boasts a long and well-established experience in the printing sector, positioning itself as a key reference point for the most important food and pharmaceutical companies that have driven economic and industrial growth throughout the 20th century. Over the years, the company has developed a fully integrated production cycle, ensuring high-quality standards and a wide range of customized solutions for its clients.

In addition to excelling in printing on paper and related materials, the company has progressively expanded its offerings by diversifying production with a variety of complementary items. These include filter bags, melamine-coated papers, stationery products, and innovative labels made from plastic materials. This integrated approach has enabled the company to respond flexibly to the ever-evolving market demands, further strengthening its reputation over time as a reliable and cutting-edge partner in the printing and packaging industry.

LONG AND WELL-ESTABLISHED EXPERIENCE IN THE PRINTING SECTOR

With over a century of consolidated experience, the company has successfully combined expertise and technological innovation, adopting cutting-edge solutions since the 1970s to optimize its production processes. The implementation of a structured system of operational procedures compliant with ISO standards, integrated into an internal company intranet, along with the application of rigorous real-time controls throughout the entire production chain, has led to a significant reduction in production costs and order execution times. This achievement has been made possible through the extensive use of advanced IT technologies and the presence of a highly specialized in-house department dedicated to the design and setup of production facilities. Since 1989, the company has developed a fully autonomous label production system, relying exclusively on digital technologies to ensure maximum efficiency and quality.

CUTTING-EDGE SOLUTIONS TO OPTIMIZE PRODUCTION PROCESSES

The evolution of process technologies and the continuous improvement of product quality have made it possible to almost entirely eliminate issues related to the use of the finished product by customers. This has had a direct impact on the productivity of partner companies, allowing them to optimize operations and increase overall efficiency. The ability to deliver a product with high standards of uniformity, characterized by extreme precision, reliability, and repeatability over time, represents a crucial factor for large-scale users who require highly efficient and consistently performing solutions in the long term.

In addition to technological advancements, the company has developed a highly efficient "on-site" support service, providing direct assistance to its customers through qualified personnel capable of offering technical and operational consulting on location.

At the same time, the adoption of sophisticated IT procedures operating in an extranet environment has ensured complete transparency and constant monitoring of the entire production cycle. These tools have made it possible to establish and strengthen a strategic collaboration with clients, transforming the relationship into an active and proactive partnership. In many cases, this synergy leads to the joint development of new products and technologies, further reinforcing the bond between the company and its commercial partners while ensuring continuous adaptation to the ever-evolving market demands.

In full compliance with the most rigorous quality standards, the company implements a structured and meticulous system of conformity checks throughout all phases of the production process, ensuring continuous and in-depth monitoring of every aspect of manufacturing. Through the integration of advanced digital technologies and an electronic certification system, multiple fundamental parameters are analyzed and verified with extreme precision. These include color levels, to ensure accurate color matching; the physical, chemical, and mechanical properties of raw materials, to guarantee compliance with the required technical specifications; dimensional tolerances, ensuring that each product strictly adheres to the established specifications; the correct digital coding of products, validated through digital code verification; and finally, the format and printing references, which must be exact and perfectly aligned with the predetermined standards.

constant
MONITORING OF
THE ENTIRE
PRODUCTION
CYCLE

To support this rigorous control activity, extensive statistical documentation and detailed analytical certification are produced, allowing for the tracking of every single phase of production and providing a complete and transparent report on the inspections carried out. All this data, collected in real time, is made immediately accessible through the company's IT system.

This approach not only ensures maximum transparency for commercial partners but also adds value in terms of reliability and safety of the finished product, enabling more efficient and informed supply management.

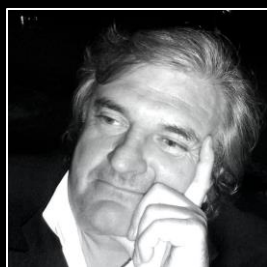

The company ensures, with the utmost attention, the protection of its products from potential chemical and mechanical agents that could compromise their integrity, while also guaranteeing easy and safe handling by the customer during in-line use. This result is achieved through the use of high-quality materials, carefully designed production processes, and the application of strict safety standards, allowing our products to maintain their characteristics even in complex operational conditions.

The high level of quality and reliability attained over the years has enabled collaboration with some of the most important industrial companies, both nationally and internationally. Thanks to a constant commitment to innovation and adherence to excellent production standards, the company has established itself as a trusted partner for businesses operating in various sectors, offering tailor-made solutions capable of meeting each client's specific needs.

The prestige and recognition of the quality of the packaging references offered by GiGraf Srl are not limited exclusively to the label sector but also extend to a wide range of printed products, catering with versatility and expertise to the needs of a diverse clientele. The company stands out for its ability to produce various types of printed materials, from promotional items such as brochures, posters, and leaflets to corporate publications and editorial products, always maintaining high-quality standards and delivering impeccable results in every aspect.

This production flexibility, combined with constant attention to detail and the pursuit of innovative solutions, has over time strengthened the company's reputation as a leader in the printing and packaging sector, making it a key reference point for clients seeking reliability, excellence, and customization in their printed products.
